

ExtrusionManager

ExtrusionManager is an easy-to-use PDM solution dedicated for the management of aluminium extrusion dies. ExtrusionManager provides full lifecycle management and revision control of extrusion die models and drawings ensuring the right information is delivered to the right people at the right time.

Product Features

How often did you spend valuable time searching for a extrusion die model or a file? Have you ever had to recreate a model because you could not find the original? Have you ever spent time creating a design only to discover later that one of your colleagues had previously modelled a similar die design that would have met your needs? If you are not using an integrated product data management (PDM) system, there are some chances to experience with these scenarios.

ExtrusionManager extends the base functionality of ExtrusionPower to allow users to find, create, load, change and save extrusion die models and drawings directly from ExtrusionPower in a common database, where users can work in a team environment to manage, share and track the data.

ExtrusionManager is specialised for highly iterative, “work-in-progress” design environments. Its tight integration with ExtrusionPower ensures that automated product data management comes naturally to the design process spanning from initial concept to released product designs. As the essential companion to ExtrusionPower 3D product design, ExtrusionManager orchestrates development efforts and organises 3D models, 2D drawings and associated files within a central database.

Eliminate the time and expense of manual data management processes. Ensure design integrity and work with up-to-date revisions of design data across the development team with safeguards against accidental data loss

Ordering Information

ExtrusionManager License	M620L
ExtrusionManager Maintenance	M620Y

Prerequisites

PTC Creo Elements/Direct Model Manager
V18, 19 or 20

System Requirements

Supported platforms:

- ☒ Windows 7 32 and 64 bit™
- ☒ Windows 8 32 and 64 bit™
- ☒ Windows10 32 and 64 bit™

Delivery Information

Software download available through
ExtrusionManager web site

Supported languages

- ☒ English
- ☒ German
- ☒ Russian
- ☒ Italian
- ☒ Turkish
- ☒ Korean
- ☒ Chinese
- ☒ Japanese

For more information, please visit

www.extrusionmanager.com

Features

- Management of Extrusion Dies, 3D assemblies and 2D drawings
- Drawing Title Block Management
- Powerful search and retrieval functions
- Revision Control
- State Management
- Roles and Permissions
- Status & Notifications
- 3D to 2D associativity
- Automatic PDF's for 2D drawings
- Bill of materials (BOM) management
- Change management
- Configurable access control
- Store multiple file types into a single system
- Automatic BOM update
- Web client
- Scalable from small machine shops to global multi site environments
